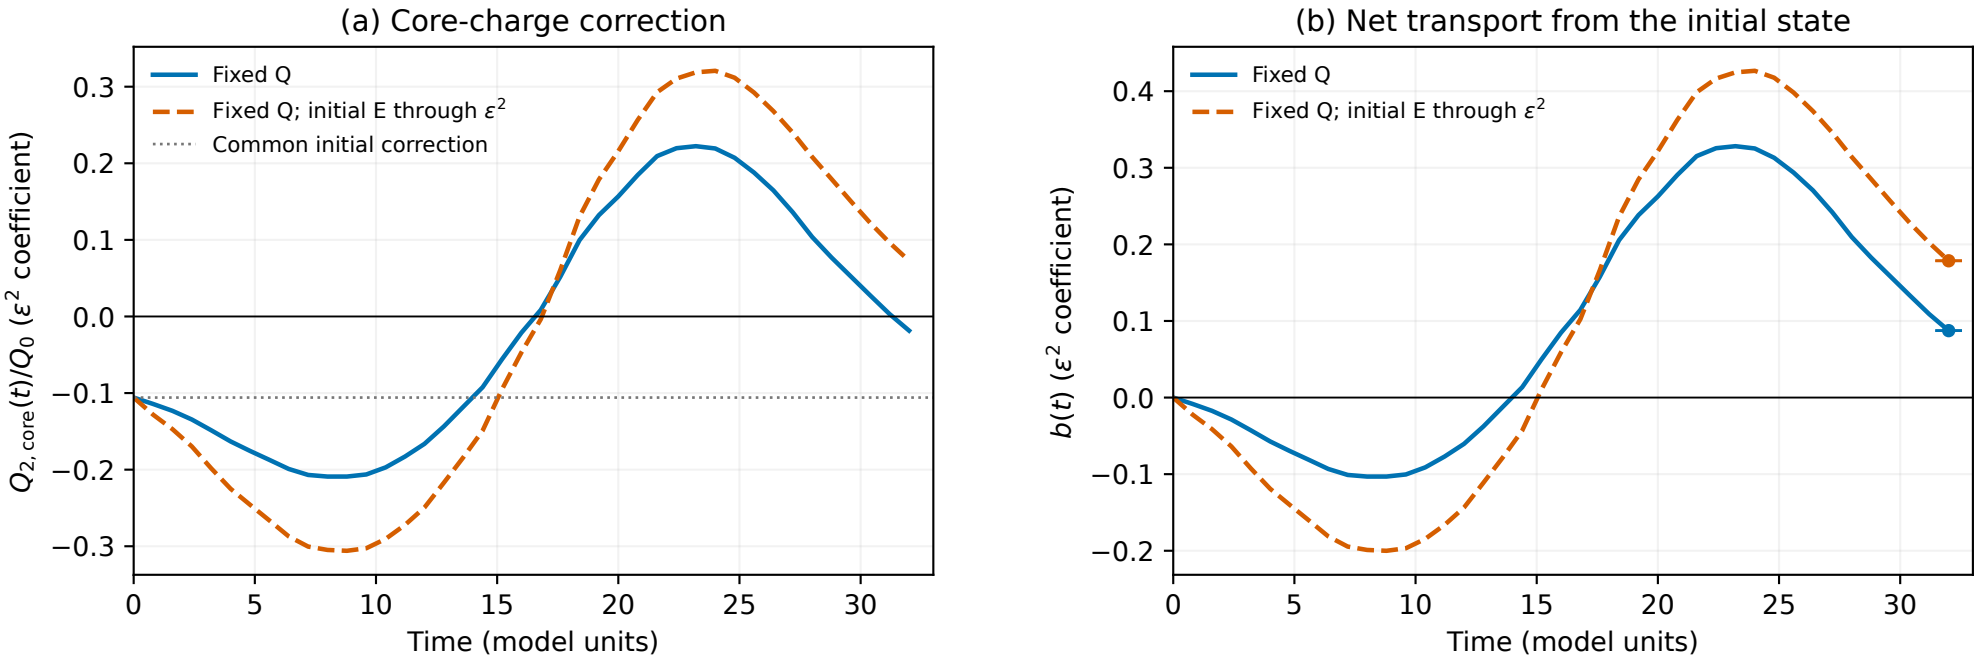
Angular response with and without initial-energy compensation



T = 32 core coefficients: -0.018508 → +0.072695; net transport: +0.087366 → +0.178569.

Endpoint caps in (b): heuristic transport guards, not CI or uncertainty bands for (a).

Coefficients at zero deformation, not finite percentages. Changed radial chirp; no binding or stability claim.
