Mean injected work — fixed nominal model
(a) Cumulative source work
OU: D = 1, correlation time = 0.1
Wiener: D = 1
Mean source work (10^{-4} model units)
Time (dimensionless model units)
(b) Difference in injected work
OU − Wiener
Endpoint ± diagnostic guard
Work difference (10^{-6} model units)
Time (dimensionless model units)
Shading: prescribed source pulse. Lines join stored samples; no interpolation model.
Endpoint interval: numerical diagnostic, not CI. Work difference is not energy storage.
Finite N = 8 series tail bounded only at the endpoint; no continuous error certification.
