Constant-phase response reconstructed from stored endpoints — T = 6
A / T0
A / T1
B / T0
B / T1
h = 0.04
h = 0.02
$\|q(T)\|_{L^2(dr)}$
$\|p(T)\|_{L^2(dr)}$
$|d(T)|$
Constant relative phase of second pulse (degrees)
Nominal linear model; equal source L² budget, not equal work or energy.
Curves are real-linear reconstructions, not independent runs or a phase optimization.
